NIGERIA TO OUTSTRIP UNITED STATES

India set to become world's most populous country by 2022, says U.N.

● India is set to overtake China and become the world's most populous country in less than a decade - six years sooner than previously forecast, the United Nations said yesterday.

Fast-growing Nigeria is on course to outstrip the United States by about 2050 to become the country with the third largest population, the United Nations predicted.

The current global population of 7.3 billion is forecast to reach 9.7 billion in 2050 and 11.2 billion in 2100, slightly above the last set of U.N. projections.

Most growth will happen in developing regions, particularly Africa, according to the report World Population Prospects.
